# TALISMAN
SECURITY SEALS

Meterloc
Plastic & Wire Security Seal

Issue: Jan 2018

The Talisman Meterloc is a very flexible security seal, comprising a two piece plastic body and a wire, which can be supplied with a variable length to suit customer requirements.

Wire or cable is secured at one end by inserting into the sealing housing and rotating the inner barrel until the wire or cable is secure, after threading the wire round or through the item to be secured, the free end of the wire is inserted into the sealing housing and the inner barrel is rotated again to ensure final sealing.

The seal body is transparent, as standard, but can have a white pad printed on the tag, allowing a bar coded or serial number to be applied.

Sealing wire can be stainless, galvanised or plastic coated to protect against environmental conditions.

The seal is light to medium duty and may require cutters to remove.

Suitable for operating temperatures from -40 to +120 degrees Celsius.

Technical Data

Applications
Meters, measuring machines, security boxes, gaming machines, etc.

Material
Body: Polycarbonate
Barrel: Polyacetal

Average Breaking Strain
40kg

Packaging
Cartons of 1000 pcs
